## 通常例会報告 2024.1.20(土)

場所:茨木市福祉文化会館 202号室  
出席者数:会員 19名、見学 3名

**Title** : Death: A perspective through a microscope

**Guest** : David Charles Calianese

(New Jersey/New York, United States of America)

**Abstract** :

Everything that lives will one day die. This is a fact of life on Earth for the entirety of its existence. As humans, we can think about death in many ways, but often we often focus on people that die around us. But within our *living* bodies death can be found occurring frequently at the cellular level. It may be surprising to know that approximately 1 million cells die in our body every second! This presentation will address the questions of how death occurs in our bodies and why it is important in the context of life since the beginning.
